

Smart Delivery Dispatch & Tracking App

Comprehensive UI Design Plan

Prepared by: Bhavya Patel

For review and approval by: Tanushree

Date: March 30, 2026

1. Overview & Purpose

This document defines the complete UI for the Smart Delivery Dispatch and Tracking web app — every page, every panel, every component. It is written so that Tanushree can review and approve it before implementation begins. Nothing is left vague: colours, layout, navigation, interactions, and role visibility are all specified here.

Section	Content	Relevant to
1. Overview	This summary + scope	Both
2. Design Philosophy	Aesthetic, inspiration, principles	Both
3. Design System	Colours, fonts, components	Both
4. Navigation System	Navbar per role, routing rules	Both
5. Page Specifications	All 10 pages in detail	Both
6. Interactions & Animations	Apple-inspired micro-interactions	Both
7. Status Badge System	Colour-coded delivery statuses	Both
8. Implementation Notes	How to apply UI to existing code	Both
9. Tanushree's Approval	Checklist for sign-off	Tanushree

2. Design Philosophy & Inspiration

Core Design Direction

The UI draws its primary inspiration from Apple's product websites — clean, generous whitespace, purposeful typography, subtle motion, and an almost invisible interface that puts content first. Think apple.com: smooth scroll-based reveals, cards that breathe, and interactions that feel satisfying without being distracting.

Principle	What it means for this app
Minimalist	No clutter. Every element earns its place. White space is used aggressively to let content breathe.
Light & Airy	Near-white (#F5F5F7) page background, white cards, very subtle shadows. Nothing heavy or dark.
Purposeful Colour	Colour is used sparingly. Electric blue (#2563EB) appears only on primary actions, active states, and links. Status colours (green/amber/red) are the only other accents.
Apple Typography	Inter font (the closest free equivalent to Apple's San Francisco). Large, confident headings. Small, readable body text. Tight tracking on headings.
Card-Based Layout	Information lives in white cards on the gray background. Cards have a gentle border-radius of 12-16px and a whisper-soft box shadow.
Interactive & Fun	Cards lift on hover. Buttons have a tactile press effect. The order timeline animates. Status badges pulse for active states. Transitions are smooth (200-300ms ease).
Role-Aware	The same visual language is used across all three roles — but what appears on screen adapts completely to who is logged in. No role ever sees another's controls.

Why This Design Fits a Delivery App

Delivery tracking products like Apple Maps, Google Maps, and Uber Eats use a near-identical language: clean status indicators, bold current-state callouts, and minimal chrome so the user can instantly understand where their order is. Our blue accent is associated universally with logistics and trust (FedEx, Amazon, DHL all use blue). The light theme reduces cognitive load during repeated use — delivery agents checking orders dozens of times a day need a calm, fast-reading interface.

3. Design System

3a. Colour Palette

Core Colours

Page Background #F5F5F7 App background (Apple gray)	Surface / Cards #FFFFFF All cards, modals, inputs	#1D1D1F Headings, labels (Apple black)	Secondary Text #6E6E73 Subtitles, metadata
--	--	--	---

Brand & Action Colours

Brand Accent (Blue) #2563EB Buttons, links, active nav	Accent Light #EFF6FF Highlighted rows, callout boxes	Deep Navy #1E3A5F Navbar background, section headers	Border #E5E5EA Card edges, input borders, dividers
---	---	---	---

Status Colours

Success (Green) #16A34A Delivered, Scheduled confirmed	Warning (Amber) #F59E0B Pending, Rescheduled	Danger (Red) #DC2626 Failed, Error states	Info (Sky Blue) #0EA5E9 Out for Delivery, In Progress
---	---	--	--

3b. Typography

Font family: **Inter** (load from Google Fonts — fonts.googleapis.com/css2?family=Inter:wght@400;500;600;700).
Inter is the closest free equivalent to Apple's SF Pro. Fall back to: system-ui, -apple-system, sans-serif.

Role	Size	Weight	Use case
Display	32px	700 Bold	Page hero headlines, login card title
H1	24px	700 Bold	Section titles (Dashboard, My Orders)
H2	18px	600 Semibold	Card headings, panel titles
H3	14px	600 Semibold	Sub-section labels, field groups
Body	15px	400 Regular	Paragraphs, descriptions, table rows
Small / Caption	12px	400 Regular	Timestamps, helper text, metadata
Button	14px	500 Medium	All button labels
Badge	11px	600 Semibold	Status chips, role tags

3c. Component Library

Component	Style Specification
Primary Button	Background: #2563EB. Text: white. Border-radius: 9999px (pill). Padding: 10px 22px. Hover: background darkens to #1D4ED8 + translateY(-1px). Active: scale(0.97). Transition: all 200ms ease.
Secondary Button	Border: 1.5px solid #2563EB. Text: #2563EB. Background: transparent. Border-radius: 9999px. Hover: background #EFF6FF.
Danger Button	Background: #DC2626. Text: white. Pill-shaped. Same hover/active rules. Used for: Mark as Failed, Cancel.
Success Button	Background: #16A34A. Text: white. Pill-shaped. Used for: Mark Delivered, Confirm.
Card	Background: #FFFFFF. Border-radius: 16px. Box-shadow: 0 1px 3px rgba(0,0,0,0.08), 0 4px 12px rgba(0,0,0,0.04). Border: 1px solid #E5E5EA. Padding: 24px. Hover: box-shadow deepens + translateY(-2px). Transition: all 250ms ease.
Input Field	Background: #FFFFFF. Border: 1.5px solid #E5E5EA. Border-radius: 10px. Padding: 10px 14px. Focus: border-color #2563EB + box-shadow 0 0 3px rgba(37,99,235,0.12). Placeholder text: #6E6E73.
Status Badge	Pill shape (border-radius: 9999px). Padding: 3px 10px. Font: 11px semibold. Each delivery status has its own colour (see Section 7). OUT_FOR_DELIVERY badge has a subtle pulse animation.
Navbar	Background: rgba(30,58,95,0.92) with backdrop-filter: blur(20px) — frosted glass effect. Height: 60px. Logo left, nav links centre, user info + logout right. Active link: white with blue underline. Inactive: muted blue-gray.
Toast / Flash Message	Appears top-right with slide-in animation. Success: green left border. Error: red left border. Auto-dismisses after 4 seconds. Used after every POST-Redirect-GET operation.
Stepper / Progress Bar	Horizontal numbered steps. Active step: blue filled circle. Completed: green check circle. Upcoming: gray circle. Connecting line: #E5E5EA (gray) → #2563EB (blue) for completed. Used on the booking form (Feature 1).
Timeline Item	Vertical line with coloured dots at each step. Dot colour matches status. Current/latest step dot is larger and has a ring. Text: timestamp left, description right. Animate in sequentially (staggered CSS animation). Used on the tracking page (Feature 4).
Data Table	Header row: navy background, white text. Body rows: alternating #FFFFFF / #F8F9FA. Hover row: light blue tint (#EFF6FF). Subtle column borders. Action buttons in final column (small, compact).
Empty State	Centered illustration placeholder + heading + subtext + CTA button. Example: 'No orders yet. Book your first delivery.' Illustration is a simple SVG icon.
Loading Spinner	Small blue circular spinner (CSS animation). Appears inside buttons during async operations and as a full-card overlay when data is loading.

4. Navigation System

There is one shared navbar component. Its contents adapt based on the role stored in the HTTP session. Navigation is strictly role-gated — a customer cannot reach /admin/dashboard by typing the URL (the controller checks the session role and redirects to /login if wrong).

Role	Nav Links	Default Landing Page
Not logged in	Logo only · Login button (right)	/login
Customer	Logo · Book Delivery · My Orders · (Track is accessed via My Orders)	/customer/orders
Delivery Agent	Logo · My Dashboard · (Order updates accessed via dashboard)	/agent/dashboard
Admin	Logo · Dashboard · (All actions within dashboard)	/admin/dashboard

Navbar Visual Details

The navbar is a frosted-glass dark navy bar fixed at the top of every page. Left side: the app logo (a small delivery truck icon + 'DeliverIQ' wordmark in white). Centre: role-specific navigation links (white text, blue underline on active page). Right side: the logged-in user's name in small text + their role badge (pill shape, muted blue) + a 'Logout' link. On mobile (if tested), the nav collapses to a hamburger menu.

Note: The app name shown in the navbar and browser tab can be decided by both of you. Placeholder: 'DeliverIQ'. This can easily be changed in one place (a Thymeleaf fragment).

5. Page-by-Page Specifications

Every page the user can visit is described below in full detail. Each entry includes: the URL route, who can see it, a layout description, and every UI element present on the page. Feature ownership is noted where applicable.

PUBLIC PAGES (no login required)

Page 1	/login
--------	--------

Login Page

Visible to: **Everyone (public)**

The entry point for all users. Customers, agents, and admins all log in here. Role is determined automatically from the database — users do not pick a role on the login form.

- Full-page layout: left half is a brand panel (navy background, teal accent, app logo, tagline), right half is the login form on a white card.
- Form fields: Email address (input, type=email) · Password (input, type=password with show/hide toggle eye icon).
- Checkbox: 'Remember me' (small, left-aligned below password field).
- Primary CTA: 'Sign In' — full-width, pill-shaped, electric blue button.
- Forgot password link below the button (small, muted blue text — placeholder only, not functional for this project).
- Divider line + 'New customer?' text + 'Create an account' link → goes to /register.
- Error state: if credentials are wrong, a red flash message appears above the form: 'Incorrect email or password. Please try again.' The fields shake briefly (CSS animation).
- On success: user is redirected to their role's default landing page (see Section 4).
- The left brand panel shows: app logo (large), a one-line tagline, and 3 small bullet points ('Fast · Reliable · Real-Time Tracking').

Page 2	/register
--------	-----------

Customer Registration

Visible to: **Public (customer self-registration only)**

Only customers create their own accounts. Agent and admin accounts are created by the admin from the dashboard. This page is intentionally simple.

- Centred card layout (no brand panel — simpler than login). White card on gray background.
- Card header: 'Create your account' (H1) + 'Get started — it takes 30 seconds' (subtitle).
- Form fields: Full Name · Email Address · Phone Number · Password · Confirm Password.
- All fields show inline validation on blur: green tick if valid, red message if invalid (e.g. 'Passwords do not match', 'Invalid email format').
- Primary CTA: 'Create Account' — full-width, pill-shaped, blue button.
- Link at bottom: 'Already have an account? Sign in' → /login.

On success: redirect to /customer/orders with a welcome toast: 'Welcome, [Name]! Your account is ready.'

Role is set to CUSTOMER automatically in the database on registration.

CUSTOMER PAGES

Page 3

/customer/orders

Customer — My Orders

Visible to: **Customer only**

The customer's home page after login. Lists all their delivery requests. This is the hub from which they access tracking.

Page header: 'My Orders' (H1, left) + 'Book New Delivery' button (primary blue, right).

Filter bar below header: Status dropdown (All / Placed / Scheduled / Assigned / Out for Delivery / Delivered / Failed) + a search box (search by order ID or address).

Orders are displayed as a card grid (2 columns on desktop, 1 on mobile).

Each order card shows: Order ID (bold) · From address (truncated) · To address · Priority badge (HIGH / MEDIUM / LOW) · Delivery type badge (IMMEDIATE / SCHEDULED) · Current status badge (colour-coded per Section 7) · Booking date (small, muted) · 'Track Order' button (blue, opens /track/{orderId}).

Immediate orders show a small lightning bolt icon. Scheduled orders show a calendar icon.

If an order is DELIVERED, the card has a green left border. If FAILED, a red left border.

Empty state: if no orders exist, show centred illustration + 'No orders yet.' + 'Book your first delivery' CTA button.

Pagination at bottom if more than 10 orders (simple prev/next, page numbers).

Page 4

/customer/book

Customer — Book a Delivery

Visible to: **Customer only** ·
FEATURE 1 (Tanushree)

A multi-step wizard form for booking a new delivery. The stepper keeps the form light and non-overwhelming — the customer only sees one step at a time.

Progress stepper at top (4 steps): Step 1: Addresses · Step 2: Package Details · Step 3: Time Slot · Step 4: Review & Confirm.

Completed steps show a green tick. Active step shows a blue filled dot. Future steps are gray.

STEP 1 — Addresses: Two text inputs side by side (Pickup Address, Delivery Address). Delivery type radio toggle below: 'Immediate Delivery' (with lightning icon) vs 'Scheduled Delivery' (with calendar icon). Selecting 'Immediate' hides the time slot step. Selecting 'Scheduled' shows it.

STEP 2 — Package Details: Package Description (textarea) · Priority selector (Low / Medium / High — styled as a 3-button toggle, like Apple's segmented control) · Special Instructions (optional textarea, placeholder: 'Fragile? Leave at door? Ring bell?').

STEP 3 — Time Slot (Scheduled only): A scrollable list of available time slots, each shown as a selectable card (date · time window · availability indicator). Selected slot has a blue border and blue checkmark. Slots that are full are grayed out.

STEP 4 — Review & Confirm: A read-only summary card showing everything entered. 'Edit' links next to each section go back to the relevant step. 'Confirm Booking' is the final primary CTA.

Navigation: 'Next' and 'Back' buttons at bottom of each step. Validation runs before advancing: if required fields are empty, inline error messages appear.

On successful booking: redirect to /customer/orders with a toast: 'Your delivery has been booked! Order #[ID]'

Visible to: **Customer (read-only)** ·
Agent (can update) · **FEATURE 4**
(Bhavya)

Order Tracking Page

The most visually important page. Customers see a live timeline. Agents see the same page but with action buttons to advance the order status. Admins can also view this page in read-only mode.

TOP SECTION — Order Summary Card: Order ID (large, bold, with copy icon) · Current status badge (large, prominent, centre or top-right) · Delivery type badge (IMMEDIATE with lightning bolt / SCHEDULED with calendar icon).

Order details within summary card: Pickup address · Delivery address · Package description · Priority · Special instructions (if any) · Assigned agent name (if assigned, else 'Not yet assigned') · Time slot (only if SCHEDULED — e.g. 'Mon, Apr 6 · 2pm – 4pm').

MIDDLE SECTION — Live Tracking Timeline: Vertical stepper timeline, left-anchored. Each TrackingEvent is one step: coloured dot (colour = status colour from Section 7) · Status name (bold) · Timestamp (small, muted) · Updated by (small — customer name or agent name) · Note (if any — shown in a small indented text block with italics).

The most recent / current event has a larger, ringed dot and the background row is faintly tinted.

Future/possible statuses not yet reached are shown as empty gray dots with dashed lines — so the customer can see where their order is headed.

Timeline items animate in from left to right sequentially on page load (staggered, 100ms delay per item).

BOTTOM SECTION — Agent Action Panel (Agent role only, hidden for Customer/Admin): Shown only when the order is in an actionable state. Header: 'Update Status'. One button per valid next status (e.g. 'Mark as Out for Delivery' in blue, 'Mark as Failed' in red). Each button opens a small inline form: a note textarea (optional for most, required for FAILED/RESCHEDULED) + a Confirm button.

Terminal state message (when DELIVERED or FAILED): agent sees 'This order is complete.' Customer sees 'Your delivery is complete. Thank you!' with a green checkmark illustration.

Flash messages: green banner for success ('Status updated successfully'), red banner for errors ('Invalid status transition').

Back button: top-left, returns to the role's home page.

AGENT PAGES

Page 6

/agent/dashboard

Visible to: **Delivery Agent only** ·**FEATURE 5 (Bhavya)**

Agent Dashboard

The agent's single-screen command centre. Everything they need to work their day is visible here without navigating anywhere.

Page header: 'Good morning, [Agent Name]' (large H1) + today's date (right).

Stats strip below header (3 small stat cards in a row): 'Right Now' (count of immediate orders currently assigned) · 'Today's Schedule' (count of scheduled orders for today) · 'Completed Today' (count of DELIVERED orders today).

SECTION 1 — RIGHT NOW (Immediate Orders): A horizontally scrollable row of order cards (or vertical list if fewer than 3). Each card: Order ID · Customer name · Pickup address → Delivery address (arrow between) · Priority badge · Current status badge · 'View & Update' button (blue, opens /track/{orderId}).

Each 'Right Now' card has a lightning bolt icon in the top-right corner to visually distinguish immediate orders at a glance.

If no immediate orders: empty state with message 'Nothing urgent right now. You're all good.'

SECTION 2 — TODAY'S SCHEDULE (Scheduled Orders): A vertical list sorted by time slot ascending. Each row: time slot pill (e.g. '2pm – 4pm') · Order ID · Customer name · Delivery address · Status badge · 'View' button.

Time slots that have passed and are still not DELIVERED are highlighted with amber background.

If no scheduled orders: 'No deliveries scheduled for today.'

The two sections are separated by a clear visual divider with a label ('Right Now' in orange · 'Today's Schedule' in blue).

ADMIN PAGES

Page 7

/admin/dashboard

Visible to: **Admin only** · **FEATURE 5**
(Bhavya)

Admin Dashboard

The admin's full-visibility control panel. The most information-dense page in the app, but kept clean by using cards, tabs, and collapsible filters.

Page header: 'Operations Dashboard' (H1) + today's date + time (right).

STATS BAR — 4 metric cards in a row across the top: 'Active Orders Today' (blue icon) · 'Delivered Today' (green icon) · 'Failed Today' (red icon) · 'Pending Assignment' (amber icon). Each card: large number + label + small trend arrow (e.g. +3 from yesterday). Cards have a subtle coloured left border matching their category.

FILTER BAR — below stats, a horizontal controls row: Status filter dropdown · Immediate vs Scheduled toggle · Agent filter dropdown (lists all agents) · Date range picker (today by default) · 'Apply Filters' button · 'Reset' link.

TWO-PANEL LAYOUT below filters, side by side:

LEFT PANEL — 'Live Orders (Immediate)': List of all immediate orders currently active. Each row: Order ID · Customer · From → To · Priority · Status badge · Agent (or 'Unassigned' in amber) · 'Assign Agent' button (if unassigned) · 'View' button.

RIGHT PANEL — 'Scheduled Queue': List of all scheduled orders sorted by time slot. Each row: Time slot · Order ID · Customer · Status badge · Agent · 'View' button.

Both panels are scrollable independently with a fixed height (no page scroll needed to see both panels simultaneously).

'Assign Agent' button: opens a small modal overlay. Modal shows: Order ID summary · Dropdown of all agents (name + how many active orders they currently have) · 'Assign' button. On submit: page refreshes with success toast.

Panel headers show a live count badge (e.g. 'Live Orders (12)').

Rows with no assigned agent are highlighted with a very faint amber background.

SHARED / UTILITY PAGES

Page 8

/error/404

404 — Page Not FoundVisible to: **All roles**

Shown when any user navigates to a non-existent URL.

Centered layout: large '404' in light gray · 'Page not found' heading · 'The page you're looking for doesn't exist.' subtext.

Primary CTA: 'Go Home' → routes to the user's role-appropriate home page (or /login if not logged in).

Simple, clean, minimal — no navbar on this page.

Page 9

/error/403

Access DeniedVisible to: **All roles**

Shown when a user tries to access a page they don't have permission for (e.g. a customer trying to reach /admin/dashboard).

Centered layout: lock icon · 'Access Denied' heading · 'You don't have permission to view this page.' · 'Go back safely' CTA.

The controller redirects to this page (or back to /login) if session role check fails.

Page 10

fragments/layout.html

Thymeleaf Layout Fragment (Shared Navbar)Visible to: **All authenticated pages**

A single Thymeleaf layout fragment included by every authenticated page. This ensures the navbar is consistent and maintained in one place.

Contains: the HTML with all CSS/JS imports (Bootstrap 5, Inter font, custom CSS) · the navbar (role-aware, using th:if on session role) · the footer · the flash message container (reads from model attributes) · a content placeholder block where each page inserts its own content.

Every Thymeleaf template should extend this layout fragment using th:replace or th:insert.

One CSS file: static/css/app.css — this is where the entire custom design system lives.

One JS file: static/js/app.js — interactions, animations, and any small UI behaviours.

6. Interactions & Animations (Apple-Inspired)

These are the interactions that will make the app feel alive and polished — the difference between 'functional' and 'impressive demo'. All of these are achievable with plain CSS + a small amount of vanilla JavaScript. No heavy frameworks needed.

Interaction	Where	CSS / JS Implementation
Page fade-in	Every page	<code>body { animation: fadeIn 0.3s ease; } @keyframes fadeIn { from { opacity: 0; transform: translateY(8px); } }</code>
Card hover lift	Order cards, stat cards, slot cards	<code>.card:hover { transform: translateY(-3px); box-shadow: 0 8px 24px rgba(0,0,0,0.12); transition: all 250ms ease; }</code>
Button press effect	All buttons	<code>.btn:active { transform: scale(0.97); } — gives satisfying tactile feel.</code>
Timeline stagger	Tracking timeline	Each <code>.timeline-item</code> gets <code>animation-delay: calc(index * 100ms)</code> so items appear one by one.
Status badge pulse	OUT_FOR_DELIVERY badge	<code>@keyframes pulse { 0%,100% { box-shadow: 0 0 0 0 rgba(14,165,233,0.4); } 50% { box-shadow: 0 0 6px rgba(14,165,233,0); } }</code>
Input focus ring	All form inputs	<code>input:focus { border-color: #2563EB; box-shadow: 0 0 3px rgba(37,99,235,0.15); outline: none; }</code>
Toast slide-in	After any form submit	Toast div slides in from top-right using <code>translateX</code> animation. Auto-removes after 4s.
Stepper transition	Booking form steps	Step content fades out + new step fades in: <code>opacity + translateX</code> transition on the content div.
Frosted navbar	Navbar (all pages)	<code>nav { background: rgba(30,58,95,0.88); backdrop-filter: blur(20px); -webkit-backdrop-filter: blur(20px); }</code>
Login field shake	Login form on error	<code>@keyframes shake { 0%,100%{translateX(0)} 25%{translateX(-6px)} 75%{translateX(6px)} }</code> Applied on error class.
Row hover highlight	Data tables (admin panel)	<code>tr:hover { background-color: #FFF6FF; transition: background 150ms ease; }</code>

7. Delivery Status Badge System

Every delivery status has a consistent colour, icon, and badge style used identically across all three roles and all pages. This table is the single source of truth for status colours.

Status	Badge Colour	Text Colour	Icon	Meaning
PLACED	Light gray (#F3F4F6)	Dark gray (#374151)	clock	Order created, awaiting scheduling/assignment.
SCHEDULED	Light blue (#DBEAFE)	Blue (#1D4ED8)	calendar	Time slot confirmed. Awaiting agent assignment.
ASSIGNED	Light indigo (#EEF2FF)	Indigo (#4338CA)	user-check	Agent assigned. Will pick up soon.
OUT_FOR_DELIVERY	Light sky (#E0F2FE)	Sky (#0369A1)	truck (animated)	Agent is on the way. Badge pulses.
DELIVERED	Light green (#DCFCE7)	Green (#15803D)	check-circle	Order completed successfully.
FAILED	Light red (#FEE2E2)	Red (#DC2626)	x-circle	Delivery attempt failed.
RESCHEDULED	Light amber (#FEF3C7)	Amber (#D97706)	refresh	Failed order rescheduled for a new slot.

CSS implementation: each badge is a span element with class 'status-badge status-PLACED' (etc.). In app.css, define .status-placed { background: #F3F4F6; color: #374151; } for each status. In the Thymeleaf templates, use th:class to apply the correct class based on order.status.

8. Implementation Notes

How to Apply the UI to Existing Code

The backend features are being built first with plain Bootstrap 5 Thymeleaf templates. The UI polish pass replaces the visual styling only — no backend logic changes. Here is exactly how to do it efficiently:

Step	Action	Time estimate
1	Create a single shared layout fragment: fragments/layout.html. Move the , navbar, and flash message area into this fragment. All other templates inherit from it with th:replace.	1–2 hrs
2	Write static/css/app.css. Define all CSS variables (--color-accent, --color-bg, etc.), typography rules, card styles, button styles, and badge styles from Section 3. Import Inter from Google Fonts.	2–3 hrs
3	Write static/js/app.js. Add: toast auto-dismiss, stepper navigation (for booking form), timeline stagger animation, card hover effects, and the badge pulse for OUT_FOR_DELIVERY.	2 hrs
4	Apply layout to each Thymeleaf template one by one. Replace Bootstrap default classes with the custom card, button, and badge classes. Split: Tanushree does login, register, book, orders. Bhavya does tracking, agent dashboard, admin dashboard.	8–10 hrs total (split)
5	Final review session: both teammates review all pages together, align on any inconsistencies, fix any template bugs. Screenshot each page for documentation.	1–2 hrs

CSS Architecture

Use a single app.css file with CSS custom properties at the top, so changing the colour scheme later requires editing just one block. Bootstrap 5 is kept as the grid foundation only — all visual styling overrides it via more specific selectors in app.css. Do NOT use Bootstrap's default blue (#0D6EFD) — always override with the brand blue (#2563EB) in app.css.

Recommended CSS file structure: 1) :root variables (colours, radii, fonts) → 2) Base resets (body, a, h1–h6) → 3) Navbar → 4) Cards → 5) Buttons → 6) Form inputs → 7) Status badges → 8) Timeline component → 9) Stepper component → 10) Dashboard panels → 11) Toast messages → 12) Animations & keyframes

Font & Icon Setup

In the of layout.html, add: Google Fonts link for Inter (weights 400, 500, 600, 700). For icons, use Bootstrap Icons (already available if Bootstrap 5 CDN is used) — these provide all the icons mentioned in this plan (truck, check-circle, calendar, etc.) as simple elements with no extra setup.

9. Tanushree's Approval Checklist

Hi Tanushree! This section is specifically for your review. Please go through each item and confirm you are happy with the plan before we begin implementing the UI. Any item you want to change, just note it and Bhavya will update the plan.

#	Item for Review	Your Sign-off
1	Overall design direction — minimalistic, Apple-inspired, light theme, electric blue (#2563EB) as brand colour.	■ Approved ■ Change:
2	Colour palette: #F5F5F7 page background, white cards, #1D1D1F text, #2563EB accent. Status colours in Section 7.	■ Approved ■ Change:
3	Font choice: Inter (Google Fonts). Weights 400/500/600/700.	■ Approved ■ Change:
4	App name placeholder: 'DeliverIQ'. (Needs decision — what should we call the app?)	■ Approved ■ Change:
5	Login page layout: split screen (brand panel left, form right).	■ Approved ■ Change:
6	Registration page: customer self-registration only. Agents/admins created by admin.	■ Approved ■ Change:
7	Booking form (Feature 1): 4-step wizard with stepper progress bar. Steps: Addresses → Package → Time Slot → Review.	■ Approved ■ Change:
8	My Orders page: card grid (2 columns), filter bar, status badges, Track button per card.	■ Approved ■ Change:
9	Tracking page (Feature 4): vertical animated timeline with future steps visible as gray dots.	■ Approved ■ Change:
10	Agent dashboard (Feature 5): two sections ('Right Now' + 'Today's Schedule') on one page.	■ Approved ■ Change:
11	Admin dashboard (Feature 5): stats bar + filters + two-column panel (Live Orders + Scheduled Queue).	■ Approved ■ Change:
12	Interactions: card hover lift, button press, toast messages, timeline stagger, OUT_FOR_DELIVERY pulse.	■ Approved ■ Change:
13	Implementation plan: single shared layout fragment + app.css + app.js, built during April 10–12 polish sprint.	■ Approved ■ Change:
14	UI split: Tanushree does login/register/book/orders pages. Bhavya does tracking/agent-dashboard/admin-dashboard.	■ Approved ■ Change:

One key open question for both of you to decide together: What should the app be called? The placeholder used throughout this plan is 'DeliverIQ'. Alternatives: 'SwiftRoute', 'Trackly', 'LastMile', 'Dispatch'. Once agreed, it needs to be set in one place: the Thymeleaf layout fragment tag and navbar logo.
